

Postdoctoral Researcher / Research Associate in Human–Computer Interaction, Data Visualization, Design

Position Type: Full-time

Start Date: Flexible (Feb 2026 preferred)

Location: University of Calgary

The **HealthVisFutures lab** is seeking a highly motivated **Postdoctoral Researcher or Research Associate** with expertise at the intersection of **Computer Science, Human–Computer Interaction, Data Visualization, and Design** to join our growing research team. Our work spans interactive systems, data visualization, digital health, and exploratory design, and we collaborate closely with clinicians, designers, and community partners.

Key Responsibilities

- Conduct high-quality research in HCI, visualization, or related interdisciplinary areas.
- Lead and contribute to the design of interactive systems, prototypes, and experimental studies.
- Collaborate with an interdisciplinary team including computer scientists, designers, clinicians, and community partners.
- Mentor undergraduate and graduate trainees, supporting their technical and academic growth.
- Prepare and publish research papers in top-tier venues such as **ACM CHI, IEEE VIS, and IEEE TVCG**.
- Present research findings at international conferences and workshops.
- Contribute to grant proposals, project coordination, and knowledge translation activities.

Required Qualifications

- A **PhD in Computer Science** or a related discipline (e.g., Information Science, Design Computing, Digital Media, Architecture, Cognitive Science).
- Demonstrated **interdisciplinary research experience**, ideally bridging computing with design, art, architecture, or health.
- A strong publication record in top venues such as **ACM CHI, IEEE VIS, IEEE TVCG**, or equivalent.
- Experience mentoring students or leading small research teams.
- Strong visual, creative, or design-oriented thinking, with experience in design methods, participatory design, speculative design, or prototyping.
- Excellent communication, interpersonal, and collaboration skills.

Preferred Assets

- Experience working on health-related, accessibility, or community-centered projects.
- Skills in visualization toolkits, interactive prototyping (e.g., D3, React, Unity), physicalization, or fabrication.
- Experience collaborating in interdisciplinary or clinical environments.

What We Offer

- The opportunity to work in a vibrant, collaborative research environment.
- Access to cutting-edge visualization, fabrication, and data science infrastructure.
- Multidisciplinary mentorship and opportunities for leadership development.
- Support for publishing, conference travel, and professional growth.

How to Apply

Please submit the following as a single PDF:

- Cover letter detailing your research experience and fit for the position.
- Curriculum vitae including publication list.
- Up to 3 representative publications or design portfolio samples.
- Names and contact information of 2–3 referees.

Applications will be reviewed on a rolling basis until 2026, Feb 1st.
